

Case Study

Automotive

Annual Savings Achieved

- £10,771.00
- 44 Tons Co2

Payback

- 2.2 Years

Benefits

- Reductions in energy costs
- Improved efficiency
- Removal of Reactive Power Charges

Cummins Turbo Technologies is at the cutting edge of engineering design, producing some of the most durable and innovative turbochargers.

The company was founded in 1952 in Huddersfield, UK and has grown to become the market leader for turbochargers in the commercial vehicle market.

PES have a long standing relationship with Cummins Turbo Technologies formally known as Holset Engineering and have introduced many energy saving systems over the years and modifications to existing energy saving systems including the introduction of EnergyAce [Power Factor Correction](#) to improve energy efficiency and reduce energy bills even further.

Payback was just over 2 years although a reduction in maintenance costs and the protection of all electrical appliances, plant and machinery will improve the real payback considerably.

For more information on how EnergyAce can benefit your organisation, contact us now on 01695 559785, post@pesgrouppltd.co.uk or visit www.energyace.co.uk
